(54) PRINTED BOARD, AND INTEGRATED CIRCUIT, AND ELECTRONIC COMPONENT

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a printed board in which generation of crosstalk can be blocked, even if miniaturization of electronic component advances and a significantly narrow interval is set between wiring patterns.

SOLUTION: In an electronic component comprising an integrated circuit mounted on a printed board, a wiring pattern A fed with a test signal for detecting crosstalk between the conduction patterns of the printed board and a wiring pattern B for receiving a radiation wave from the wiring pattern A, in response to the test signal are formed on the printed board. The integrated circuit comprises a test terminal connected with the wiring pattern A and outputting the test signal, a test terminal connected with the wiring pattern B, and a means for determining the intensity of crosstalks from a detection signal inputted to the test terminal.
